## THE 1994 ASIAN PACIFIC MATHEMATICAL OLYMPIAD

Time allowed: 4 hours
NO calculators are to be used.
Each question is worth seven points.

## Question 1

Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be a function such that
(i) For all $x, y \in \mathbb{R}$,

$$
f(x)+f(y)+1 \geq f(x+y) \geq f(x)+f(y)
$$

(ii) For all $x \in[0,1), f(0) \geq f(x)$,
(iii) $-f(-1)=f(1)=1$.

Find all such functions $f$.

## Question 2

Given a nondegenerate triangle $A B C$, with circumcentre $O$, orthocentre $H$, and circumradius $R$, prove that $|O H|<3 R$.

## Question 3

Let $n$ be an integer of the form $a^{2}+b^{2}$, where $a$ and $b$ are relatively prime integers and such that if $p$ is a prime, $p \leq \sqrt{n}$, then $p$ divides $a b$. Determine all such $n$.

## Question 4

Is there an infinite set of points in the plane such that no three points are collinear, and the distance between any two points is rational?

## Question 5

You are given three lists A, B, and C. List A contains the numbers of the form $10^{k}$ in base 10 , with $k$ any integer greater than or equal to 1 . Lists B and C contain the same numbers translated into base 2 and 5 respectively:

| A | B | C |
| :--- | :--- | :--- |
| 10 | 1010 | 20 |
| 100 | 1100100 | 400 |
| 1000 | 1111101000 | 13000 |
| $\vdots$ | $\vdots$ | $\vdots$ |

Prove that for every integer $n>1$, there is exactly one number in exactly one of the lists B or C that has exactly $n$ digits.
